HERZOG & DE MEURON

Jacques Herzog and Pierre de Meuron, established their practice in 1978 in Basel, Switzerland. Now numbering close to 500 collaborators with offices worldwide, the partnership has designed award-winning spaces for cultural organizations, hotels, museums, residences and sports stadiums.

Known for transforming traditional architectural materials through innovative treatment and complex geometric expression yet retaining a focus on the essentials of design, among their best-known projects are The Tate Modern, Beijing's Olympic Stadium, Prada Tokyo and Miami's 1111 Lincoln Road.

Amongst other awards, they are the recipients, in 2001, of The Pritzker Architectural Prize.

FLEXIBILITY

The Pipe luminaire family available in floor, wall, ceiling, and suspension embodies the full functionality of a broad range of movement and flexibility, featuring a fully adjustable upper stem and rotatable diffuser. The floor luminaire features an incorporated dimmer switch.

WHIMSICAL

Pipe's undulating form inspires a whimsical atmosphere with its steel base coat-ed with a silicone, "soft touch" sheath. Its perforated diffuser in transparent poly-carbonate with rubber-effect coat, and internal reflector create pleasantly sheer ambient lighting.

REIMAGINED

Pipe has been reimagined in LED, to adapt to today's standards of intelligent, eco-friendly, and energy efficient lighting.
